#### Introduction

With our redi Reporting Portal, we want to provide you a very comprehensive and fast reporting tool.

The possibilities go far beyond the retrieval of simple performance records in data tables. You have the possibility to create various graphical evaluations for freely definable periods of time and to save them for further use, e.g. in your own presentations.

All data tables are also exportable and can therefore be used in Excel, in your own IT systems (which support CSV-import) or as PDF.

For the provision of data we ensure the high demands of data security taking into consideration the ISO27001 standards.

With this manual we guide you step by step through our reporting portal.

We are always pleased to receive your feedback and suggestions.

### User login

In your browser, visit the "redi Reporting Portal" website at <u>https://dmfe.redi-group.com/</u>

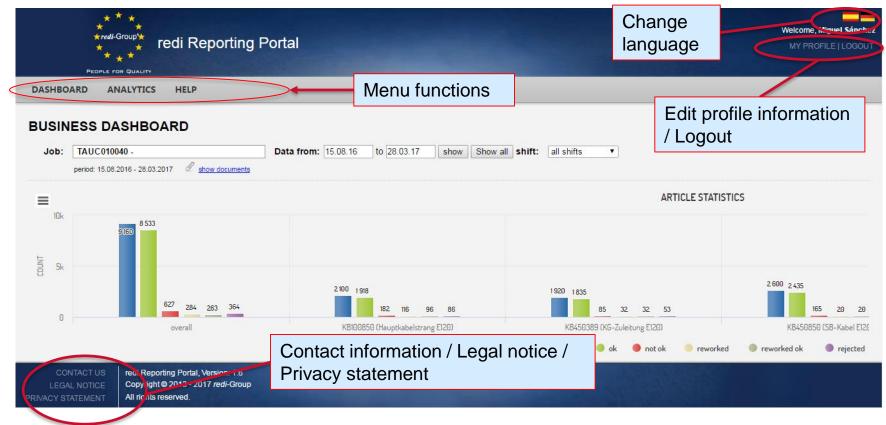

Please login into the platform with the access data you received.

#### 1. Main menu

You can access the menu functions: Dashboard, Analytics and Help via the main menu. You can also change the language, change/update your profile data, log out the system and access to the contact information, legal notice and privacy statement.

### 1.1 My profile / Language selection / Logout

With the menu function "MY PROFILE" you are able to change the profile information such as first name, last name, password, telephone number and standard order. Click on the corresponding flag to change the language, between German, English and Spanish. Click "Logout" to logout the system.

1.1 My profile / Language selection / Logout

In the "Job List" tab, you will find a list of all activated job numbers.

Click on the hyperlink on the job number to access directly to the job information.

Furthermore you may also activate periodic E-mail reports of the Jobs you define.

For this, select the desired delivery interval (daily / weekly), and then a click the check box to activate the automatic reports. The selection is saved automatically.

### 1.2 Dashboard

This is the predefined mask that you will see first when you login. It displays the OK and NOK parts and provides a fast failure features overview. Further details can be requested via this form. If you have not selected a standard job, no graphics are displayed at the beginning.

### 1.3 Analytics

With this menu function you can consult more detailed information (articles, failures, failure characteristics, working times, and job documents). In addition, you can export data.

*redi-*Group®

### 1.4 System Help

Here you can get an overview of the redi Reporting Portal and access to the manual. You are also able to suggest improvements or report problems that have occurred when using the portal.

*redi-*Group®

# **REDI REPORTING PORTAL**

### 2. Operation DASHBOARD

When you press the menu button DASHBOARD, the system displays the article statistics. If no job number has been selected or is the first call, no analytics will be displayed.

#### Confirm your selection by pressing [Enter].

*redi-*Group®

4.4

# **REDI REPORTING PORTAL**

### 2.2. Part statistics

The part statistics of the job is displayed in the upper section, within the range you have selected.

Determine the time period and click "show". To see the total statistics of the job, click "Show all"

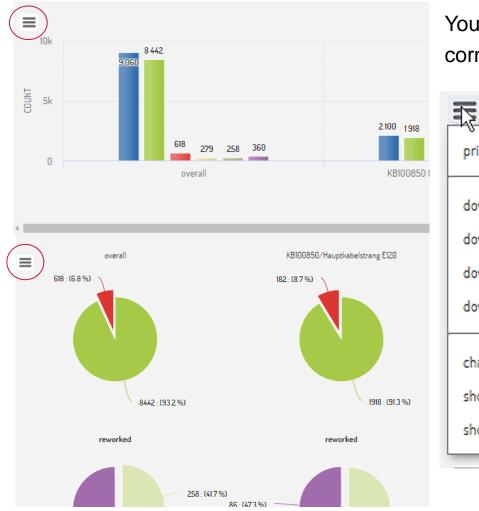

You can also restrict all statistics to a single work shift.

 $\checkmark$  By clicking on the category you can hide it and show it again .

# **REDI REPORTING PORTAL**

#### 2.2. Part statistics

You can find in every chart in the upper-left corner the menu-icon

print chart P download as PNG th download as JPG C download as PDF C download as SVG a change chart type show/hide labels show/hide all data

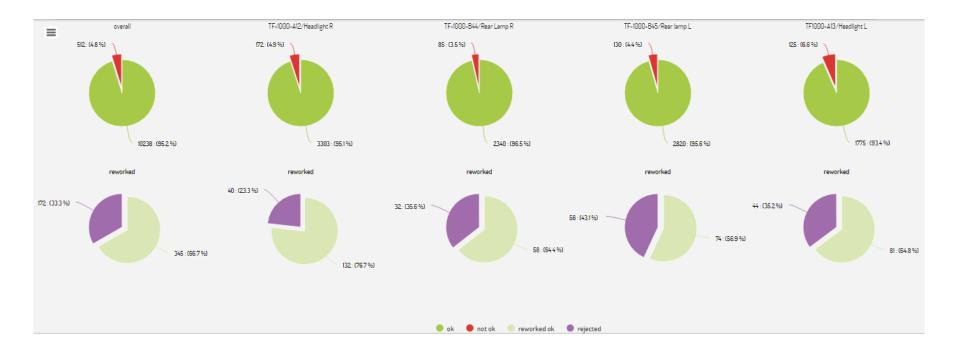

Here you have the possibility to print or save the chart. Also, depending on the diagram, you can change the type of diagram and hide and show the labels and data.

#### *redi-*Group<sup>®</sup>

### **REDI REPORTING PORTAL**

#### 2.2. Part statistics

In the lower section are displayed the OK, NOK, reworked OK in a cake chart.

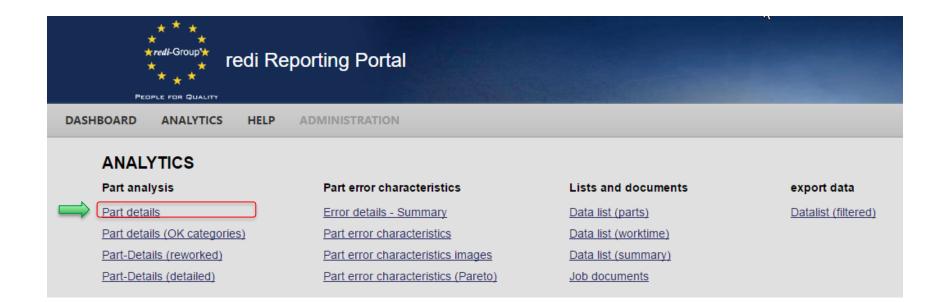

# **REDI REPORTING PORTAL**

### 3. Operation ANALYTICS

Now we call up further graphics / statistics via the menu "Analytics".

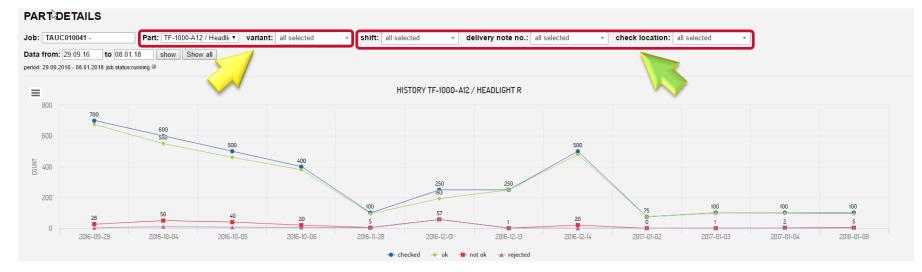

Let's start with the "Part details" menu.

# **REDI REPORTING PORTAL**

#### 3.1 Part details

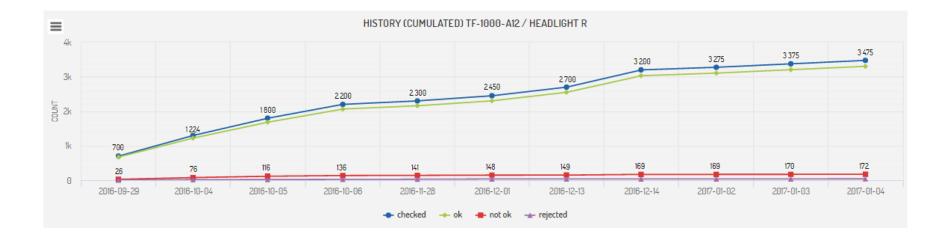

The first chart shows the performance of a particular part <u>on individual days</u> over the time period you have chosen.

Click the field "Part" to change the part to be displayed. If there are variants available you can also select them. Further you can select by shifts, delivery notes or check locations. Click on a category in the legend to show or hide it. When you move the mouse over the charts, more information is displayed.

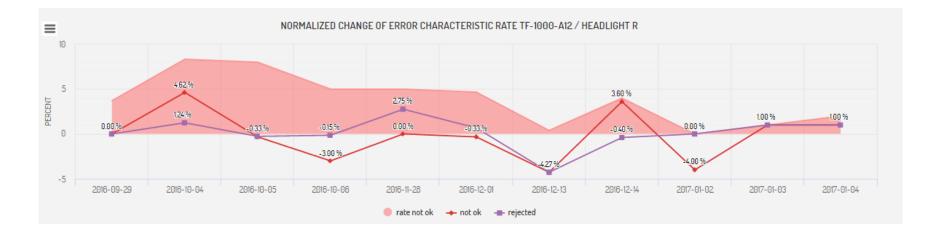

### 3.1 Part details

The second chart shows the <u>cumulative</u> history of the part over the period you selected.

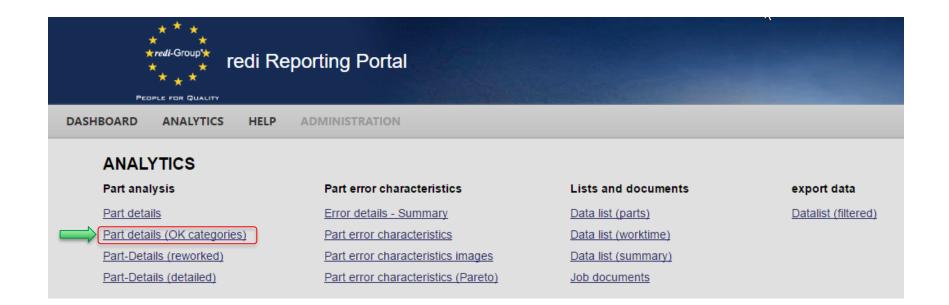

### 3.1 Part details

The third chart shows the <u>normalized</u> error rate variation of the part during the period you have selected.

### 3.1.1 Part details (OK categories)

The function "Part Details (OK categories)" allows you to show/analyse even differences for OK parts (e.g. delivery quality level).

# **REDI REPORTING PORTAL**

### 3.1.1 Part details (OK categories)

In the shown example you can see the first chart with separation of two categories for dust inclusions sorted by size of particles.

The presentation is according pareto principal. The known selectors are also available here.

# **REDI REPORTING PORTAL**

### 3.1.1 Part details (OK categories)

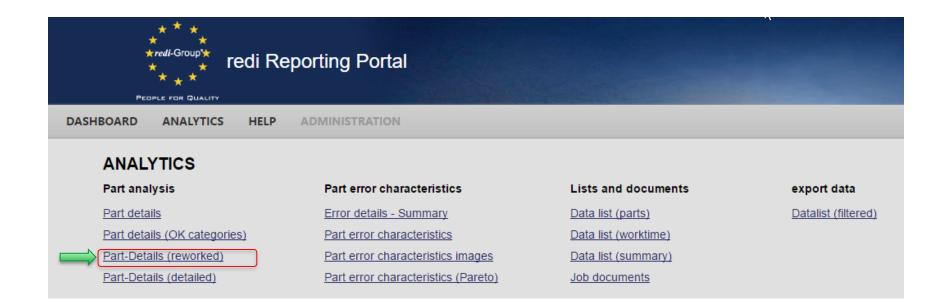

The second chart shows a colored visualization of the OK categories. You can hide or show the categories by clicking the name of categorie in the legend. The used color can be adjusted by our inspectors according to your demands already during checking and recording.

# **REDI REPORTING PORTAL**

### 3.1.2 Part details (reworked)

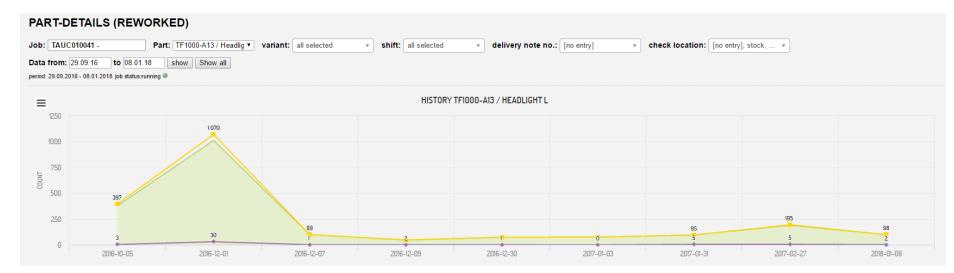

Click on the function "Part Details (Reworked)" to create a chart showing the history of the rework within the period you have selected for a particular part number.

# **REDI REPORTING PORTAL**

### 3.1.2 Part details (reworked)

The first chart shows the history of the rework of a particular part in individual days over the time period you have selected.

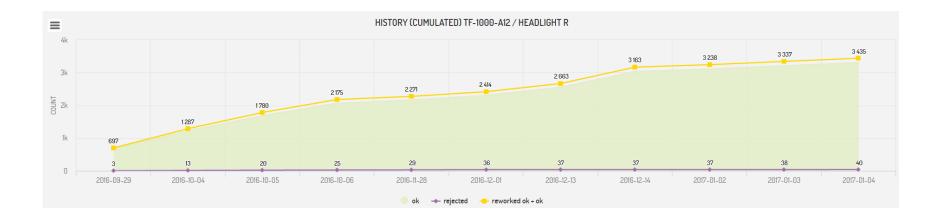

In the header you can select by parts, variants, shifts, delivery notes or check locations.

# **REDI REPORTING PORTAL**

### 3.1.2 Part details (reworked)

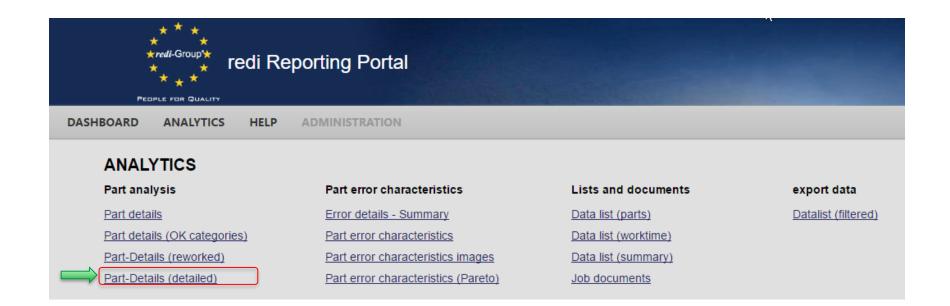

The second chart shows the <u>cumulative</u> rework rate of a particular part over the time period you have selected.

### **REDI REPORTING PORTAL**

### 3.1.3 Part details (detailed)

In "Part Details (detailed)" you can see ongoing charts even if no NOK parts were found.

### 3.1.3 Part details (detailed)

The first chart shows OK and NOK results. You can hide and show the columns by clicking the categorie in the legend. You can switch between column chart and line chart by choosing the function in the menu.

With the selectors in the header you can adjust the parameters for presented results.

### **REDI REPORTING PORTAL**

### 3.1.3 Part details (detailed)

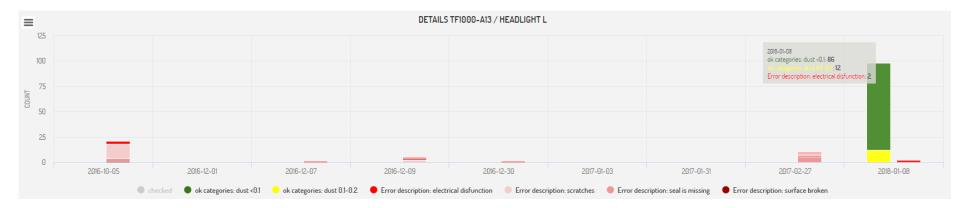

By clicking the NOK column for one day the corresponding error details will be shown. By click on "Back to overview" you can go back to the main chart.

### **REDI REPORTING PORTAL**

### 3.1.3 Part details (detailed)

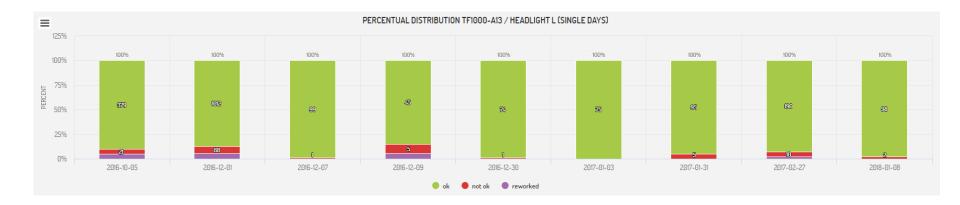

The second chart shows a stapled column for the OK and NOK categories. You can select the shown categories by clicking the name in the legend.

# **REDI REPORTING PORTAL**

### 3.1.3 Part details (detailed)

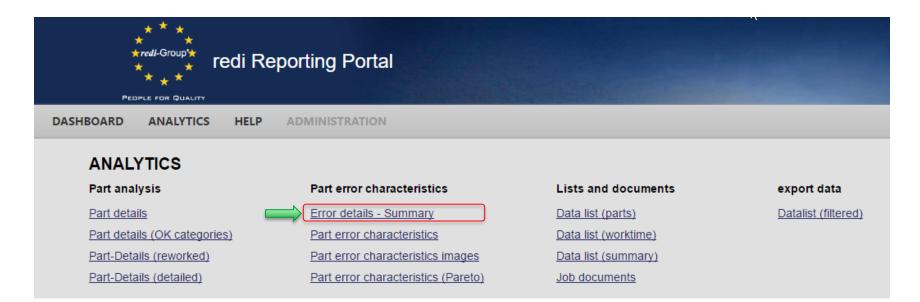

Chart 3 will show you the percentual distribution between OK, NOK and reworked parts. The view can be adjusted by clicking the categories in the legend.

# **REDI REPORTING PORTAL**

### 3.2 Error details - Summary

Click on the function "Error details - Summary" to create a chart that shows the error characteristics distribution including <u>all the parts</u> in a job over the time period you selected.

# **REDI REPORTING PORTAL**

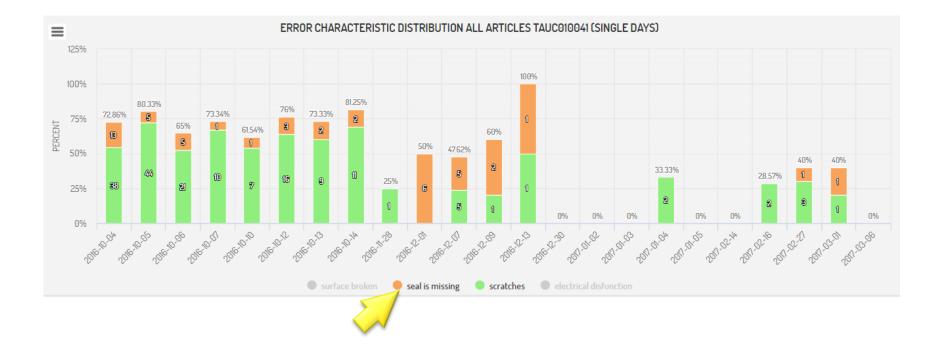

### 3.2 Error details - Summary

You can select both the period and the shifts. If you move the cursor on the columns detailed information will be displayed.

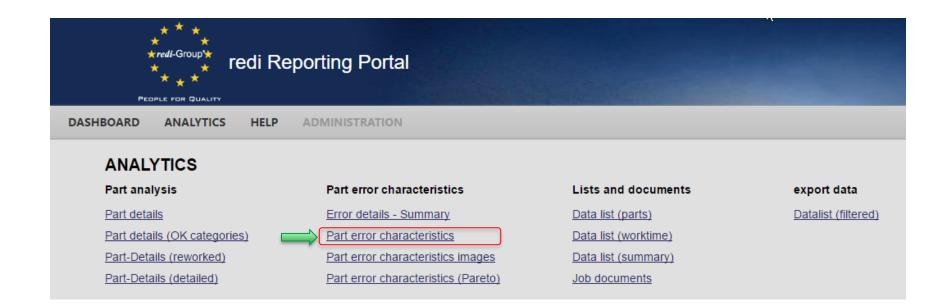

### 3.2 Error details - Summary

Z Click on an individual error cause in the legend below, to consider it individually.

#### 3.2.1 Part error characteristics

Let us now go on to the evaluation of "part error characteristics".

#### 3.2.1 Part error characteristic

The first chart shows the <u>complete distribution</u> of error characteristics of a particular part in the time period you have selected.

#### *redi-*Group<sup>®</sup>

## **REDI REPORTING PORTAL**

### 3.2.1 Part error characteristic

The second chart shows the error distribution <u>on single days</u> of a particular part over the period of time you have selected.

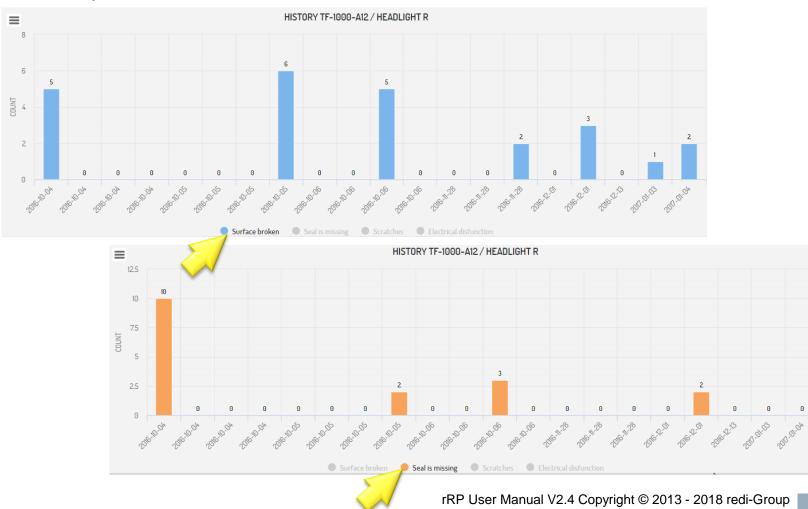

- Click on one or more error causes to consider them individually.
- If you place the mouse cursor on the column, detailed information will be shown.

#### *redi-*Group<sup>®</sup>

## **REDI REPORTING PORTAL**

### 3.2.1 Part error characteristic

#### For example:

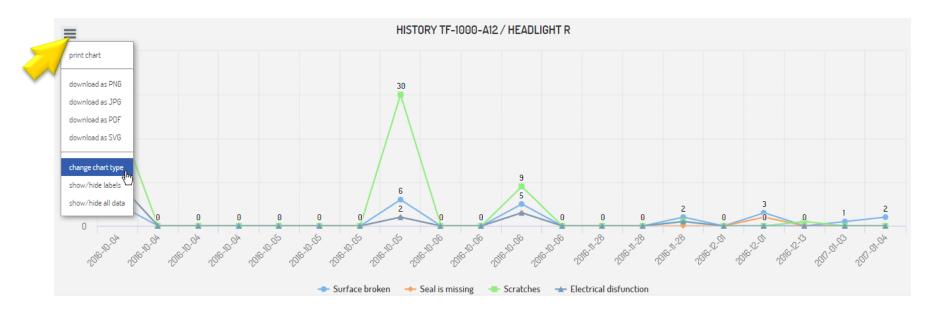

42

## **REDI REPORTING PORTAL**

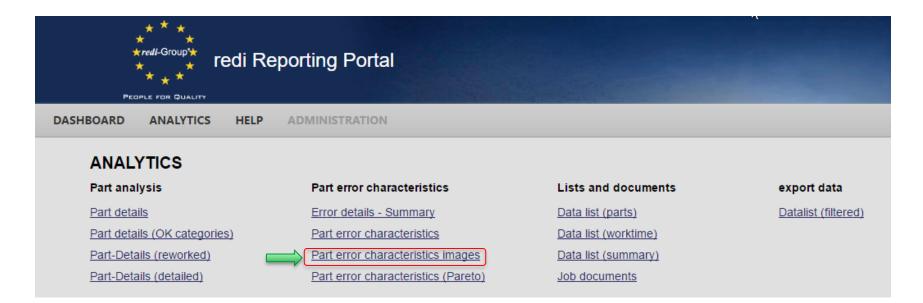

#### 3.2.1 Part error characteristic

 $\checkmark$  With the "Change chart type" function under the menu icon  $\equiv$  you can convert the chart into a line diagram and display or hide markings.

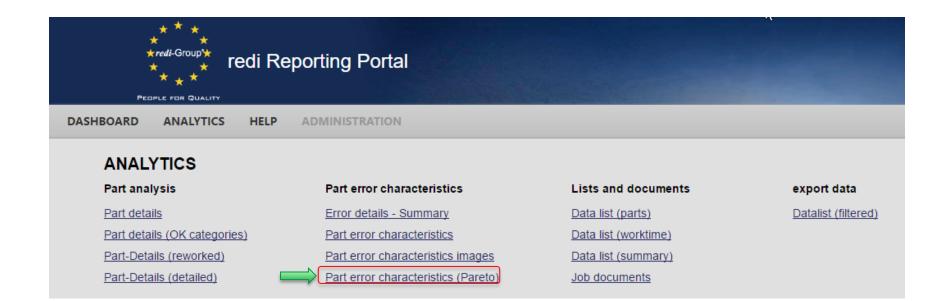

### 3.2.2 Part error characteristics images

With the function "Part error characteristics images", you can view the images (if any are attached) of a specific error characteristic in the specified article over the time period you have selected.

### 3.2.3 Part error characteristics (Pareto)

Using the function "Part error characteristics (Pareto)", you can create a Pareto chart of all the error characteristics of the specified part over the time period you have selected.

### 3.2.3 Part error characteristics (Pareto)

#### / Click on the field "Part" to select the desired part.

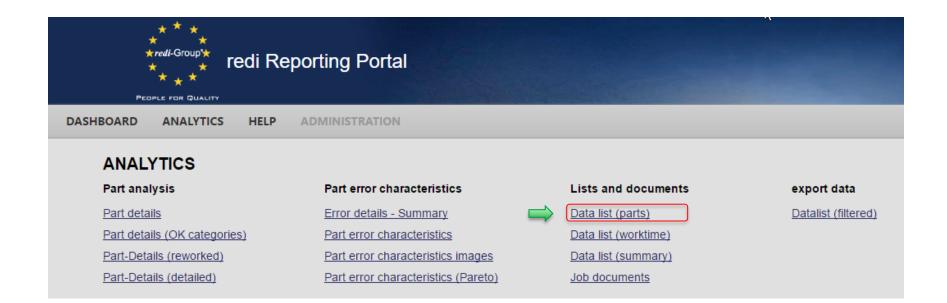

With the menu "data range" you can evaluate up to 5 freely defined time periods.

## **REDI REPORTING PORTAL**

### 3.3 Data list (parts)

In the section "Lists and Documents", you will find the function "Data list (parts)". With this function you can retrieve a data table with all inspected parts in the job.

## **REDI REPORTING PORTAL**

### 3.3 Data list (parts)

First select the time period for which you want to create the table.

Sy clicking the corresponding button, you can export the table to an Excel or CSV file. The "Excel (simple)" function imports the article data without the detailed information of failure features and the function "Excel (complete)" imports the article data with the detailed information of failure features. Use the "Quick Print" function to open the print function window.

## **REDI REPORTING PORTAL**

### 3.7 Data list (filtered)

With the function "Data List (filtered)" you can create a fully customized data table. This can include information of various jobs.

#### *redi-*Group<sup>®</sup>

## **REDI REPORTING PORTAL**

### 3.7 Data list (filtered)

You can restrict the time period and filter the job number, the client, the reference number, the location and part number.

In the example list below, the article number is filtered and all records where the part number begins with "TF" are displayed

Data list (filtered)
